Work Experience

T-Mobile (via Concentrix) | Overland Park, KS | Lead Developer | 12/2024 - Present

- Started on an Angular self-service stack with a Spring Boot BFF layer, diagnosing a cross-stack authentication defect where an unconditional anonymous-token remind silently overwrote a shared session across three different applications, then landed the token-reuse fix that eliminated the concealed 401 errors.
- Extended the NodeJS microservices BFF to integrate external billing systems for authenticated and guest-pay flows, building HapiJS services with OpenAPI-driven codegen, Joi validation, and repository-service-controller layering, plus Google reCAPTCHA Enterprise bot protection across guest-facing endpoints.
- Built and maintained AEM components in Java and TypeScript across the multi-brand AlpineJS and OSGi architecture platform, shipping account-management and payment features reused across Metro, T-Mobile Prepaid, and Assurance Wireless without forking code.
- Led the migration of Metro's Guest Pay and Authenticated Bill Pay experiences from the legacy stack onto the new Svelte and Astro-based platform, and shipping a performance-focused rebuild that took Guest Pay's load time from 3.43s to 1.3s (~62% faster) and server response time from 1.6s to 0.35s (~78% faster) at full production scale.
- Reviewed merge requests and mentored engineers across the organization under Agile/Scrum sprints, and established the WireMock assertion patterns required to catch false-passing Playwright error-path tests team-wide.

Tesark Technologies | Bangalore, India | Software Engineer II | 09/2019 - 07/2022

- Designed and built scalable enterprise web systems in ReactJS, Next.js, Node.js, and Express with MongoDB and PostgreSQL on AWS, supporting a product line generating \$2M+ in annual revenue.
- Engineered a multi-layer token-based authentication system that provided secure real-time reporting and data analysis to third-party vendors previously limited to static exports.
- Drove technology evaluation and release planning for a 5-engineer team and ran client-facing technical discussions that converted requirements into scoped delivery schedules.

Box8 | Bangalore, India | Software Engineer Intern | 01/2019 - 08/2019

- Integrated payment-gateway APIs in Ruby on Rails with Redis and PostgreSQL for Google Pay, Paytm, and PhonePe, reaching a 93% settlement success rate and a 33% increase in end-user engagement.

Education

Master of Science in Computer Science

Indiana University Bloomington, Bloomington, IN
Teaching Assistant, Intro to Software Systems (CS-C212)

2024

GPA: 3.82 / 4.00

Bachelor of Technology in Computer Science and Engineering

Dayananda Sagar University, Bangalore, India
Vice President, Computer Society of India student chapter

2019

GPA: 9.21 / 10.00

Skills

Languages: TypeScript, JavaScript, Python, Java, Ruby, SQL

Frontend: Svelte, Astro, React, Next.js, Angular, NgRx, CSR, SSR, SSG, design systems, WCAG & axe-core, responsive CSS and SCSS

Backend: Node.js, Hapi, Express, REST API design, OpenAPI and Swagger, Joi and Zod validation, Ruby on Rails, Django, Adobe Experience Manager

Data and infrastructure: PostgreSQL, MongoDB, SQLite, Redis, AWS, Docker, Kubernetes

Testing and tooling: Playwright, Vitest, Jest, WireMock, Nx, Turborepo, Git, GitLab CI/CD, ESLint, Husky

Observability and delivery: OpenTelemetry, Splunk, Conductor, LaunchDarkly feature flags

Process: Agile, Scrum, sprint planning, code review, cross-team collaboration

Certifications

JLPT N3 Japanese Language Proficiency

2020
